## D205 Data Acquisition Performance Assessment

### A. Research Question-

The research question is to identify if there is a correlation between the tenure of a customer, the number of service failures, and the length of time it took to correct the failure. “Is there a correlation between the tenure of a customer, the number of service failures, and the length of time it took to correct the failure?” To answer this research question data will be retrieved from both the original churn database “customers” and the CSV file survey\_response.

#### A1. Identifying Data-

To answer our research question we will need to extract data from the original churn database. From this data source, we will use the number of months they’ve been a customer which is listed under the “tenure,” “yearly\_equip\_failures,” and “outage\_sec\_week” columns of the customer table. Next, data will be imported from the add-on CSV file survey\_response table. We will utilize the columns, “timely\_fixes” and “timely\_replacements” from the survey\_response table. We will compare this data to see if the length of tenure correlates to the number of service failures and the importance rating of timely fixes and timely replacements. We will then draw a conclusion on if there is a correlation on whether service failure and length of time to correct contribute to the length of tenure.

### B. Logical Data Model-

See attached screenshot of the logical model.

#### B1.Code For The Physical Data Model-

```
CREATE TABLE public.msda_survey_response1
(
    customer_id "char" NOT NULL,
    timely_responses integer,
    timely_fixes integer,
    timely_replacements integer,
    reliability integer,
    options integer,
    respectful_response integer,
    courteous_exchange integer,
    evidence_of_active_listening integer,
    CONSTRAINT "customer.customer_id" PRIMARY KEY (customer_id),
    CONSTRAINT c1 FOREIGN KEY (customer_id)
        REFERENCES public.msda_survey_response (customer_id) MATCH SIMPLE
```

```
    ON UPDATE NO ACTION  
    ON DELETE NO ACTION  
    NOT VALID  
);  
  
ALTER TABLE public.msda_survey_response1  
OWNER to postgres;
```

B2. Loading CSV Data-

**Import/Export data - table 'msda\_survey\_response'**

Options

Columns

Import/Export

Import

**File Info**

Filename

C:\LabFiles\Survey\_Responses.csv

...

Format

CSV

Encoding

Select an item...

**Miscellaneous**

OID

No

Header

Yes

Delimiter

,

Specifies the character that separates columns within each row (line) of the file. The default is a tab character in text format, a comma in CSV format. This must be a single one-byte character. This option is not allowed when using binary format.

✕ Cancel

✓ OK

**Import/Export data - table 'msda\_survey\_response'**

Options

Columns

Header

Yes

Delimiter

,

Specifies the character that separates columns within each row (line) of the file. The default is a tab character in text format, a comma in CSV format. This must be a single one-byte character. This option is not allowed when using binary format.

Quote

"

Specifies the quoting character to be used when a data value is quoted. The default is double-quote. This must be a single one-byte character. This option is allowed only when using CSV format.

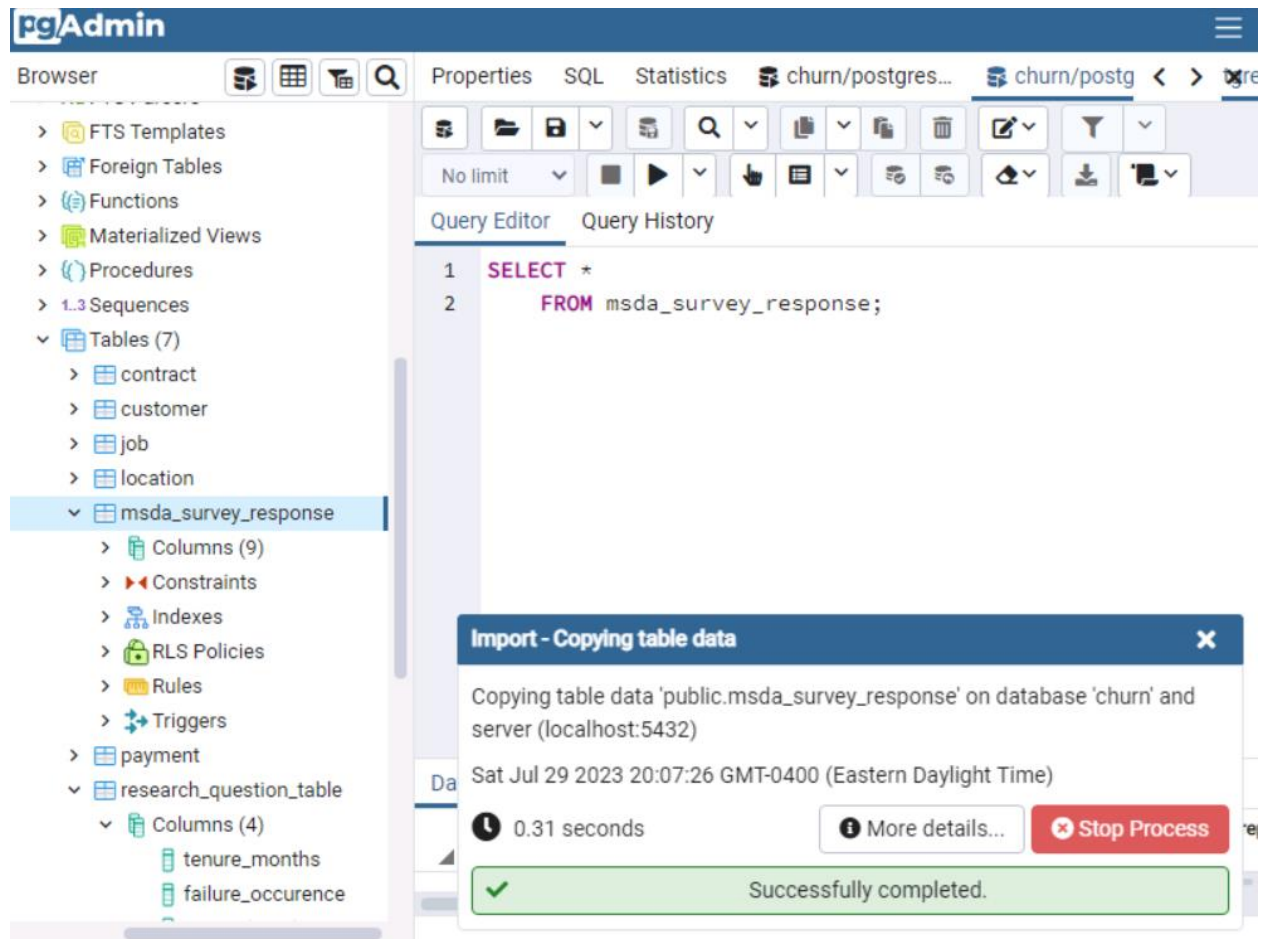

Escape

'

Specifies the character that should appear before a data character that matches the QUOTE value. The default is the same as the QUOTE value (so that the quoting character is doubled if it appears in the data). This must be a single one-byte character. This option is allowed only when using CSV format.

✕ Cancel

✓ OK

### C. SQL Query-

1. Locate the number of service failures greater than 0
2. Locate length of tenure less than 6 months
3. Locate outage sec per week greater than 0
4. Importance of timely fixes/replacements greater than 4

```
SELECT c1.customer_id, tenure, c1.yearly equip_faiure, outage_sec_week,
msr1.customer_id, timely_fixes, timely_replacements
FROM customer AS c1
INNER JOIN msda_survey_response1 AS msr1
ON c1.customer_id = msr1.customer_id
WHERE c1.yearly equip_faiure > 0 AND outage_sec_week > 0 AND tenure < 6 AND
timely_fixes < 4 OR timely_replacements < 4;
```

The image displays two screenshots of the pgAdmin 4 interface. The top screenshot shows a SQL query in the Query Editor that selects customer information and outage data. The bottom screenshot shows a more complex query that joins survey responses with customer data to filter for specific service issues.

**Top Screenshot: Query and Results**

```

1 SELECT c1.customer_id, tenure, c1.yearly equip_faiure, outage_sec_week
2 FROM customer AS c1
3 INNER JOIN msda_survey_response AS msr
4 ON c1.customer_id = msr.customer_id
5 WHERE c1.yearly equip_faiure > 0 AND outage_sec_week > 0 AND tenure < 6;

```

	customer_id [PK] text	tenure numeric	yearly equip_faiure integer	outage_sec_week numeric
1	A127838	5.402848		6.895659
2	A145480	2.5238884		10.58093125
3	A219935	2.567035		10.50151
4	A267074	3.83138		10.03056

**Bottom Screenshot: Query and Results**

```

3 FROM customer AS c1
4 INNER JOIN msda_survey_response AS msr
5 ON c1.customer_id = msr.customer_id
6 WHERE c1.yearly equip_faiure > 0 AND outage_sec_week > 0 AND tenure > 6;
7
8
9 SELECT msr.customer_id, timely_fixes, timely_replacements
10 FROM msda_survey_response AS msr
11 INNER JOIN customer AS c1
12 ON c1.customer_id = msr.customer_id
13 WHERE timely_fixes < 4 OR timely_replacements < 4;

```

	customer_id [PK] character varying (40)	timely_fixes integer	timely_replacements integer
1	A00088	3	3
2	A04204	3	4
3	A04830	3	3
4	A05946	3	3
5	A08755	5	3
6	A103291	3	5
7	A105398	2	4

#### C1. CSV Files-

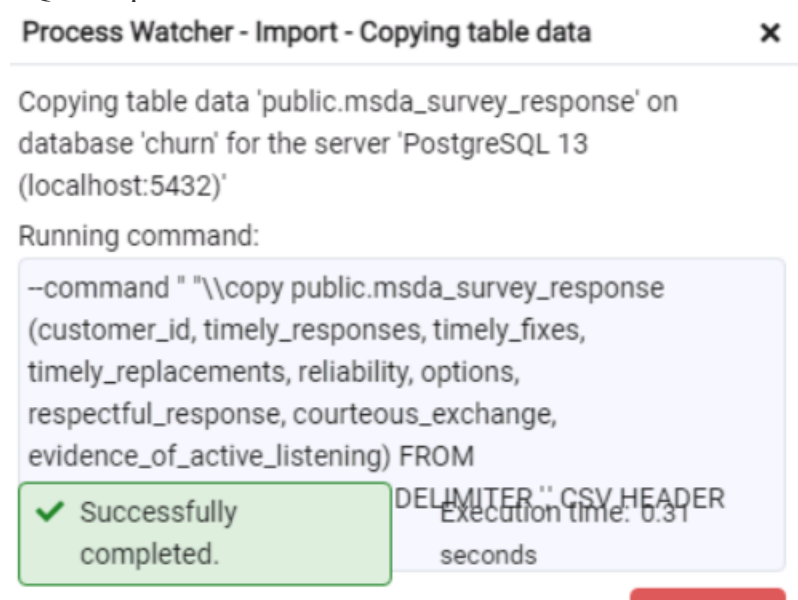

<C:\Users\ntrei\Downloads\output1.csv>

<C:\Users\ntrei\Downloads\output2.csv>

#### D. Add On File-

The add-on file should be refreshed in the database each time new survey responses become available to acquire the most accurate and relevant data to the business and research question.

## E. SQL Script-

## F. Panopto Video-

<https://wgu.hosted.panopto.com/Panopto/Pages/Viewer.aspx?id=3594381d-3982-4267-ad57-b050010297ed>

<https://wgu.hosted.panopto.com/Panopto/Pages/Viewer.aspx?id=3723e7cf-a77d-4e1f-8237-b050014e22de>

## G. Web Sources-

Web sources were not used to acquire data or segments of third-party code.

## H. Sources-

Sources outside of the original churn database and survey response CSV file were not utilized in my submission.
